MATHEMATICAL OPERATIONS

Addition
Subtraction
Multiplication
Division

Addition

Addition is the process of combining numbers to get a total or sum.

Other keywords: altogether, combined,in all , total and sum.

THE SECRET OF PLACE VALUES

Millions, Hundred Thousands ,Ten Thousands ,Thousands ,Hundreds Tens, ones.

Each digit has a home so digit without a place value is like a king without a kingdom.

Quick hot cake

1.Farmer harvested 345 oranges on Monday and 278 oranges on Tuesday. How many oranges did he harvest altogether?

2.A school library had 2,345 books. Parents donated 1,567 more books. Find the total number of books.

3. Rwanda exported 1,234,567 kg of coffee in January and 2,345,678 kg in February. Find the total export.

4.A football stadium had 45,678 fans on Saturday and 56,789 fans on Sunday. How many fans attended altogether?

5.A shopkeeper earned 345,670 francs in the morning and 456,780 francs in the evening. Find the total money earned.

6.A teacher bought 125 pens for P4, 145 pens for P5, and 167 pens for P6. How many pens did she buy altogether?

7.A school has 1,245 boys and 1,378 girls. What is the total population of learners?

SUBTRACTION

Subtraction is the mathematical operation used to take away one quantity from another in order to find the difference or the amount remaining.

Keywords:takeaway, minus,difference,left, remain, fewer, spent……

Subtraction is the art of losing things carefully using mathematics

It also means numbers are disappearing.

Quick hot cake

1. A farmer had 456 goats. He sold 178 goats. How many goats remained?

2. A school had 1,245 books. 567 books were damaged by rain. How many books remained?

3. A shopkeeper earned 345,000 francs and spent 123,450 francs. How much money remained?

4. Rwanda produced 2,345,678 kg of maize. 1,234,567 kg were exported. Find the remaining quantity.

5. A bus had 78 passengers. 29 passengers got off at the next stop. How many passengers remained?

6. football stadium had 56,789 fans. After the match, 23,456 fans left early. How many remained inside?

7. A teacher bought 900 pens for learners. 478 pens were distributed. How many pens remained?

8. What is difference between 3,456,213 and 6,784,000

Multiplication

Multiplication is a mathematical operation used to add equal groups repeatedly.

keywords : multiply, times, product, groups of , repeated addition, double,triple, twice……..

We can multiply by using one , two or three digits. **A multiplication table is the secret weapon of mathematics. Learners who know it solve questions like superheroes and those ones who do not know start counting fingers until tomorrow.**

Big mind questions

1.A bus makes 14 trips per day, and each trip carries 45 passengers.

How many passengers are carried in one day?

2.A worker earns 5,000 francs per day. He works for 18 days.

How much money does he earn in total?

3.A farmer planted 25 rows of beans, and each row has 12 plants.

How many bean plants are there in total?

4.A trader packed 36 baskets of tomatoes, and each basket contains 15 tomatoes.

How many tomatoes did the trader pack altogether?

cont

5.A school has 18 classrooms, and each classroom has 24 desks.

How many desks are there altogether?

6. factory produces 125 bottles per hour. It works for 16 hours a day.

How many bottles are produced in one day?

7.A stadium has 32 rows, and each row has 45 seats.

How many seats are there in total?

8.A phone company sends 99 messages per hour. If it operates for 24 hours, how many messages are sent?

9.A water tank supplies 250 litres per hour for 20 hours.

How many litres are supplied in total?

Division

Division is a mathematical operation used to split a number into equal parts or to find how many times one number is contained in another.

Keywords: *divide, share, split, equal groups,quotient, remainder. Each, per left over, distributed .*

D**ivision is the mathematical process where numbers are forced to behave, share equally, and accept leftovers without complaining.**

Key Points: 1. The multiplication chart is the brain's shortcut no counting fingers, just instant number power

It is the "mathematics cheat code" that makes learners solve problems faster than thinking twice

QUICK HOT CAKE

1.A farmer harvested 8,964 mangoes and arranged them equally into 8 baskets. How many mangoes are in each basket?

2.A trader has 12,345 oranges and packs them equally into 25 crates. How many oranges are in each crate?

3. A stadium has 45,678 seats arranged equally in 36 rows. How many seats are in each row?

4.A school library has 123,456 books to be arranged equally on 24 shelves. How many books are on each shelf?

5.A company earns 999,999 francs and divides it equally among 9 departments. How much does each department receive?

The number survival rules

1. Mathematical operations are ways of working with numbers to solve problems in real life, such as counting, sharing, and measuring.

2. There are four main operations: addition, subtraction, multiplication, and division, each with a different role in handling numbers.

3. They follow specific rules and procedures (like carrying in addition or borrowing in subtraction) to ensure correct answers.

4. Mathematical operations are used in daily life, such as shopping, cooking, farming, banking, and transport.

5. Accuracy and practice are very important because small mistakes in operations can lead to completely wrong results.

HOMEWORK

A shop sold 345 pens in the morning and 278 pens in the evening. How many pens were sold altogether?

. A farmer had 1,200 chickens. He sold 456 chickens. How many chickens are left?

A class has 24 learners. They are divided equally into 6 groups. How many learners are in each group?

.A trader buys 35 boxes of soap, and each box contains 12 pieces of soap. How many pieces of soap are there altogether?

A school library had 2,450 books. It received 1,275 more books. How many books are there now?

A water tank had 5,000 litres of water. After usage, 2,345 litres were left. How much water was used?

CONT

A teacher gives 15 exercise books to each of 18 learners. How many exercise books are given in total?

A bus carried 96 passengers in the morning trip and 84 passengers in the afternoon trip. How many passengers were carried in total?

A farmer harvested 3,600 oranges and packed them equally into 12 baskets. How many oranges are in each basket?

A shopkeeper had 1,000 francs. He spent 450 francs on food, 230 francs on transport, and 120 francs on other items. How much money is left?
